

Series 680 Technology

SoundScape technology lets you immerse yourself in the best available 360° listening experience, mimicking the organic sound processing of the human ear to produce sounds that are rich, clear and natural as they can be. Additionally, when you need it to, it automatically lets you focus on speech even in noisy surroundings.

The Feedback Manager Plus feature ensures feedback free hearing when you get close to someone or hold a phone close to your ear. Feedback Manager Plus targets and removes feedback, rapidly and precisely, without influencing the settings of the hearing device.

The Personal Noise Reduction feature automatically reduces noise depending on where you are. By a smaller degree when you're in the comfort of your own home, and by a much larger degree if you are in a noisy area, such as in a restaurant with family and friends.

The P Series state-of-the-art automatic directionality feature adjust to the sounds around you so you'll be able to focus on speech at all times.
